

## Safety First

Doing extra cooking today? Be extra safe, check out these 5 safety tips!

**1. Check gas regulator and hose time to time.**

Use only equipment approved by SIRIM. It is encouraged to change the gas regulator every 5 years and hose every 2 years.

**2. Check leakage with soap water.**

If there are bubbles, remove gas regulator and bring the cylinder to an area with good ventilation.

**3. Odd smells mean gas leakage**

Commonly described as resembling that of onions, durian or cooked cabbage. Switch off all sources of the fire and do not operate electrical appliances.

**4. Always ensure good ventilation**

Do not store gas cylinder in an unventilated area and never leave cooking unattended.

**5. Keep a safe distance**

Make sure the distance between the gas cylinder and store is 1.0 – 1.5 meters. The store or any other heat source must be placed away from the cylinder.

SIRIM-certified regulator (SIRIM label)

Non-certified regulator (no SIRIM label)

Low Pressure Regulator

High Pressure Regulator

**Caution: Use only low-pressure regulator for any home consumer gas hob.**
